B530-A-% rCV

The graph displays the daily count of COVID-19 cases in the United States. The data begins in late October with a low number of cases. It shows a rapid increase, peaking in early November. Following this peak, the case count fluctuates, with a notable decline in January. A major surge occurs in late March, reaching a peak of nearly 100,000 cases, before declining again in April.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is on a logarithmic scale, with major ticks at 100,000 and 1,000,000. The x-axis spans from October to April. A red dashed vertical line is positioned at the beginning of the data series in late October. The data shows a period of low case counts (mostly below 100,000) from late October through March, followed by a sharp spike in early April that exceeds 1,000,000 cases.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A red dashed vertical line is positioned at approximately November 20th, labeled 'lockdown'.
