The graph displays the daily count of COVID-19 cases in the United States from November to April. The x-axis represents time in months, with labels for Nov, Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a grid extending up to 100,000. A vertical red dashed line is positioned at the end of December. The data shows a period of low case counts (mostly below 10,000) from November through early February. Starting in late February, there is a rapid and significant increase in cases, reaching a peak of approximately 100,000 in early March. Following this peak, the number of cases begins to decline, returning to levels below 10,000 by late March and remaining relatively stable through April.

The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The y-axis represents the number of cases, ranging from 0 to 20. The x-axis shows the months: Nov, Dec, Jan, Feb, Mar, and Apr. A red dashed vertical line is positioned at the beginning of December, indicating the start of the second wave. The data shows a peak in late December, followed by a decline and then a sharp spike in early March, reaching over 20 cases. The number of cases then fluctuates at a lower level through April.

| Month | Day | Cases |
|-------|-----|-------|
| Nov | 1 | 8.5 |
| Nov | 2 | 8.5 |
