The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The y-axis represents the number of cases, with major grid lines at 0, 2,000, 4,000, 6,000, 8,000, and 10,000. The x-axis shows the months from November to April. A blue line with circular markers tracks the daily case counts. A vertical dashed red line is placed at the end of December, marking the implementation of a strict lockdown. The data shows a period of high volatility and rising case numbers in November and December, peaking at nearly 10,000 cases in late December. Following the lockdown, there is a sharp drop in cases, with a notable spike in early March reaching approximately 8,000 cases, before settling into a lower, more stable range for the remainder of the period shown.

The graph illustrates the progression of COVID-19 cases in the Netherlands. The first wave peaks in early January at nearly 10,000 cases. After a period of relative stability and low case counts, a second wave begins in late February, peaking in early March at approximately 3,000 cases. The data shows significant daily fluctuations throughout the period.

The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The y-axis represents the number of cases, with major grid lines at 0, 20,000, 40,000, 60,000, 80,000, and 100,000. The x-axis shows the months from November to April. A red dashed vertical line is positioned at the beginning of December, indicating the start of the second wave. The first wave peaks in late November at approximately 80,000 cases. The second wave peaks in early March at approximately 100,000 cases. The graph shows a significant increase in cases starting in late December, followed by a sharp rise in early March.

The graph displays the daily count of COVID-19 cases in the United States from November to April. The x-axis represents time, with labels for Nov, Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a grid of horizontal lines. A vertical dashed red line is positioned at approximately December 19, 2019, indicating the date of the first case. The data shows a significant peak in cases in early January, followed by a decline and then a second, smaller peak in early March. The data points are connected by a solid black line, and the area under the line is filled with a light blue color.

The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The y-axis is labeled with values 5, 10, and 15. The x-axis is labeled with months: Nov, Dec, Jan, Feb, Mar, and Apr. A vertical dashed red line is positioned at the beginning of December. The data shows a first wave peaking at approximately 12 cases in late November, followed by a decline. A second wave begins in early December, peaking at 15 cases in early March, and then subsiding by April.

The graph displays the daily number of COVID-19 cases in the United States. The y-axis is labeled with values 7.5, 10.0, 12.5, and 15.0. The x-axis is labeled with months: Nov, Dec, Jan, Feb, Mar, and Apr. A red dashed vertical line is positioned at the end of December. The data shows a general upward trend from November through early December, peaking at approximately 14.5 cases. Following the red line, there is a sharp drop to around 8.5 cases, followed by a period of low volatility with a minor peak in early March reaching 15.0 cases, and then a decline to around 6.5 cases by mid-March, remaining relatively stable thereafter.

The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled 'Number of cases' and ranges from 0 to 100,000 in increments of 20,000. The x-axis shows months from November to April. A red dashed vertical line is positioned at the beginning of December, indicating the start of the second wave. The data shows a first wave peaking in late November at approximately 40,000 cases, followed by a decline. A second, much larger wave begins in early December, reaching a peak of nearly 100,000 cases in early March, before declining again.

The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The y-axis represents the number of cases, ranging from 0 to 20. The x-axis shows the months: Nov, Dec, Jan, Feb, Mar, and Apr. A red dashed vertical line is positioned at the beginning of December, indicating the start of the second wave. The data shows a period of relative stability in November, followed by a sharp increase in early December. After a decline in January, there is a significant peak in early March, reaching over 20 cases, followed by a period of fluctuation in April.
