The graph displays the daily number of COVID-19 cases in the United States from November to April. The y-axis represents the number of cases, ranging from 0 to 1,000,000. The x-axis shows the months from November to April. A vertical dashed red line is drawn at the end of December. The graph shows a significant peak in late December, followed by a sharp decline and a period of low case counts through January and February. A small, sharp spike occurs in early March, followed by a decline and a period of low case counts through April.

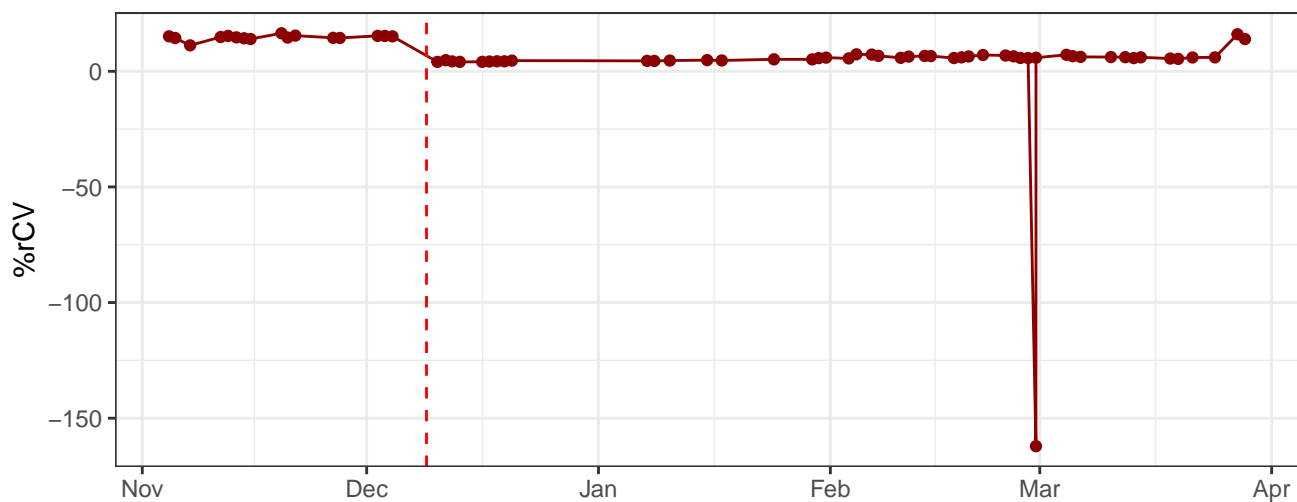

The graph illustrates the daily reported COVID-19 cases in the Netherlands. The data shows a period of high case counts (up to nearly 10,000) in late November and early December, followed by a sharp decline after the lockdown. A major spike occurred in early March, reaching approximately 10,000 cases, before returning to low levels.

The graph displays the daily count of COVID-19 cases in the United States. The data shows high volatility in late 2020, with a major surge in early March. A vertical dashed red line marks the end of December, after which the case counts generally decreased, with a notable exception being the sharp spike in early March.
