The graph displays the daily count of COVID-19 cases in the United States from November to April. The x-axis represents time in months, and the y-axis represents the number of cases. The data shows a period of low activity in November and early December, followed by a rapid ascent starting in late December. The cases reach a peak in early March, after which they begin to decline, showing some fluctuations in the process.

The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The x-axis represents time in months, and the y-axis represents the number of cases. The data shows a general upward trend with significant fluctuations. A major peak occurs in late March, reaching approximately 11,000 cases. Following this peak, there is a sharp decline in early April, with cases dropping to around 1,000, before a slight increase in the latter part of the month.

The graph displays the daily count of COVID-19 cases in the United States from November to April. The x-axis represents time in months, and the y-axis represents the number of cases. The data shows a general upward trend with significant daily fluctuations. A major peak occurs in early March, where cases exceed 100,000. Following this peak, there is a period of decline and stabilization, with cases fluctuating between 20,000 and 40,000 through April.
