The graph displays the percentage of reads with coverage variation (%rCV) over time. The y-axis is labeled '%rCV' and ranges from 1 to 7. The x-axis shows months from May to January. A black line with small black dots represents the data. Three vertical red dashed lines are positioned at approximately May 15, June 15, and October 15. The data shows a relatively stable %rCV around 2.0-2.5 from May to late October. Starting in late October, there is a significant increase, with several peaks reaching above 4.0. The highest peak is nearly 7.0 in late December. Following this peak, the %rCV drops sharply in early January, returning to around 1.5-2.0.

The graph displays the percentage of reads with coverage variance (%rCV) over time. The y-axis is labeled '%rCV' and ranges from 1 to 7. The x-axis shows months, with labels for Jul, Oct, and Jan. The data shows a baseline around 2% rCV until late September, followed by a sharp increase to a peak of nearly 7% in early January, and then a rapid decline back to baseline by mid-January. Vertical dashed red lines are present at approximately May 15, June 15, and January 15.
