The graph displays the monthly variation of the number of COVID-19 cases in the Republic of Serbia. The y-axis represents the number of cases, with major grid lines at 0, 20,000, 40,000, 60,000, 80,000, and 100,000. The x-axis shows months from June to April. The data points are connected by a black line, and each point is marked with a black dot. Three vertical red dashed lines are drawn at approximately June 15, July 15, and December 15, 2020. The number of cases starts around 10,000 in June, rises to a peak of nearly 60,000 in late 2020, then drops sharply to around 10,000 in early 2021, before rising again to a peak of nearly 100,000 in late 2021.

The graph displays the monthly variation of the number of deaths in the United Kingdom from 1966 to 1969. The y-axis represents the number of deaths, ranging from 0 to 20. The x-axis represents time, with labels for July, October, January, and April. The data shows a significant peak in deaths around 1968, reaching over 20 deaths per month, followed by a sharp decline and a period of low mortality.
