B530-A-% rCV

The graph displays the daily count of COVID-19 cases in the United States. The data begins in late October with a low number of cases. It shows a rapid increase, peaking in early November. Following this peak, the case count fluctuates, with a notable decline in January. A major surge occurs in late March, reaching a peak of nearly 100,000 cases, before dropping sharply and showing a slight uptick in April.

The graph displays the daily count of COVID-19 cases in the United States. The data begins in late October with a low number of cases, which then increases rapidly, peaking in early November. Following this peak, the number of cases generally declines, with a notable exception being a sharp spike in late March. The data ends in early April with a slight increase in cases.

The graph displays the daily number of COVID-19 cases in the United States. The data shows a period of relative stability with minor fluctuations between October and November 2020. Following the implementation of the vaccination campaign in December, there is a noticeable decline in case numbers. However, a sharp and significant increase occurs in early April 2021, with cases peaking at approximately 95,000 before declining again.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A red dashed vertical line is positioned at approximately January 20, 2020. The data shows a period of low activity until late February, followed by a sharp increase in cases, peaking at over 20 cases in early March, and then a rapid decline back to low levels by mid-March.
