The graph displays the daily number of COVID-19 cases in the United States. The y-axis is logarithmic, with major ticks at 100,000 and 1,000,000. The x-axis spans from October to April. A vertical dashed red line is positioned at the beginning of the data series in early November. The data shows a period of low case counts (mostly below 100,000) from November to December, followed by a massive spike in early January, peaking at over 1,000,000 cases. After the peak, the case counts decline and remain relatively low through April.

The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of fluctuating case counts from September through late December, with a notable peak in early January exceeding 20 cases. Following this peak, there is a sharp decline and a subsequent period of lower, more stable case counts from February through April. A vertical dashed red line at the end of December indicates the onset of the lockdown.
