The graph displays the daily count of COVID-19 cases in the United States. The data begins in early November, indicated by a red dashed line. The case counts remain relatively low, generally below 10,000, until January. A significant surge occurs in early February, with cases peaking at approximately 95,000. Following this peak, the case counts drop sharply and remain at low levels, generally below 10,000, through April.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A vertical dashed red line is positioned at approximately November 1st. The data shows a period of fluctuating case counts between September and early November, with peaks around 12-14 cases. Following the red line, there is a sharp spike to over 20 cases in early November, followed by a rapid decline and a period of low case counts (mostly below 5 cases) from January through April.
