The scatter plot displays the number of deaths over time. The x-axis is marked with 'Oct', 'Jan', and 'Apr'. The y-axis represents the number of deaths, with horizontal grid lines indicating intervals. Data points are black dots. There are two high points in the early part of the timeline, two more high points later, and two low points near the end. Vertical dashed red lines are present at specific time points.

Time t	Fidelity $F(t)$
100	0.4100
150	0.4100
200	0.4100
350	0.4100
400	0.4100
550	0.4000
950	0.4000
1000	0.4000

Figure 1 is a scatter plot showing the time series of the normalized difference in the number of cases between the two regions. The y-axis represents the normalized difference, ranging from 0.64 to 0.76. The x-axis represents time, with labels for Oct, Jan, and Apr. The plot shows a sharp drop in the normalized difference around October, followed by a period of low values, and then a sharp increase around January. Vertical dashed red lines indicate the dates of the first and second waves of the pandemic.
