The graph displays the daily number of COVID-19 cases in the Netherlands from October to April. The y-axis represents the number of cases, ranging from 0 to 15. The x-axis shows the months from October to April. A red dashed vertical line is positioned at the end of December, indicating the start of the second wave. The first wave peaks in late December at approximately 12 cases. Following a period of low case numbers, the second wave begins in early March, reaching a peak of 15 cases in early April, before declining again.

The graph displays the daily number of COVID-19 cases in the United States from October to April. The y-axis represents the number of cases, ranging from 0 to 15.0. The x-axis shows months from Oct to Apr. A red dashed vertical line marks the start of the second wave in late December. The graph shows a significant increase in cases starting in late December, peaking at approximately 15.0 cases in early January, followed by a sharp decline and a subsequent rise in late January/early February, peaking again at approximately 15.0 cases in early February, and then a decline towards the end of the period.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 20,000, 40,000, 60,000, 80,000, and 100,000. The x-axis is labeled with months: Oct, Jan, and Apr. A vertical dashed red line is positioned at the end of December. The data shows a period of fluctuating case counts between 10,000 and 30,000 in late 2020, followed by a massive spike in early January 2021 that reaches approximately 95,000 cases. After this peak, the case counts drop sharply and remain relatively low, mostly below 10,000, through April 2021.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A red dashed vertical line is positioned at approximately March 11, 2020. The data shows a period of low case counts from October through early March, followed by a rapid increase peaking at over 20 cases in late March. After this peak, the case counts drop sharply and remain relatively low and stable through April.
