B530-A-% rCV

The graph illustrates the progression of COVID-19 cases in the Netherlands. The initial wave peaks in late December, followed by a period of relative stability and low case counts. A second, smaller wave emerges in late February/early March, peaking around 4,000 cases, before declining again. The red dashed line indicates the implementation of the first lockdown, which coincides with the end of the first major wave.

The graph illustrates the progression of COVID-19 cases in the Netherlands. The initial wave peaks in late November, followed by a period of relative stability and minor fluctuations. A second, more significant wave begins in late March, peaking in late March and then declining. The red dashed line indicates the implementation of the first lockdown, which coincides with the start of the second wave.

The graph illustrates the daily reported COVID-19 cases in the Netherlands. The data shows a period of high case counts in late 2020, followed by a significant reduction after the implementation of the lockdown. A major resurgence occurred in early 2021, peaking in March before declining again.
