The graph displays the daily count of COVID-19 cases in the United States from October 1st to April 1st. The y-axis represents the number of cases, ranging from 0 to 120,000 in increments of 20,000. The x-axis shows the months from October to April. The data points are connected by a blue line, showing a general upward trend with significant fluctuations. A major peak occurs in early March, reaching approximately 110,000 cases. Following this peak, there is a sharp decline and then a period of relative stability around 40,000 cases, before a final decline in late March.

Month	Approximate Daily Case Count Range
October	10,000 - 30,000
November	10,000 - 25,000
December	20,000 - 40,000
January	30,000 - 50,000
February	30,000 - 50,000
March	20,000 - 110,000 (Peak)
April	10,000 - 40,000

The graph displays the daily number of COVID-19 cases in the United States from November to April. The x-axis represents time, with labels for November, December, January, February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of relative stability with low case counts from November through early January. Starting in late January, there is a sharp and rapid increase in cases, reaching a peak of approximately 100,000 in early March. Following this peak, the number of cases begins to decline, showing a downward trend through April.
