The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled 'Number of cases' and ranges from 0 to 10,000 in increments of 2,000. The x-axis shows months from October to April. A vertical dashed red line is positioned at the beginning of November, indicating the start of the lockdown. The data shows a sharp initial peak in late September, followed by a period of relative stability with minor fluctuations. After the lockdown, there is a significant and sustained decrease in the number of cases, with a few isolated spikes, most notably one in late March.

The graph displays the daily number of COVID-19 cases in the United States. The y-axis is labeled 'Number of cases' and ranges from 0 to 100,000. The x-axis is labeled 'Date' and spans from September to April. A vertical dashed red line at approximately November 20, 2019, indicates the 'lockdown' period. The data shows a sharp initial spike in early September, followed by a period of relative stability with minor fluctuations. A significant peak occurs in late November, just before the lockdown. Following the lockdown, the number of cases drops precipitously and remains at a low, stable level through April, with a minor uptick in late March.
