B530-A-% rCV

The graph illustrates the progression of COVID-19 cases in the Netherlands. A significant peak occurred in late September, followed by a period of high volatility with multiple smaller peaks. The implementation of the lockdown in March, indicated by the red dashed line, led to a rapid decline in cases, which remained at very low levels through April, except for a minor resurgence in late March.

The graph displays the daily number of COVID-19 cases in the Netherlands from September to April 2020. The y-axis represents the number of cases, ranging from 0 to 15. The x-axis represents time, with labels for October, January, and April. A red dashed vertical line indicates the start of the first lockdown in late November. The data shows a period of low case counts in September, followed by a gradual increase in October and November. A sharp peak occurs in late November/early December, reaching approximately 12 cases. This is followed by a rapid decline and a period of low case counts, with a notable spike in mid-March reaching 15 cases.

The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled 'Number of cases' and ranges from 0 to 15. The x-axis shows months from September to April. A red dashed vertical line is positioned at the end of November, indicating the first lockdown. The data shows a sharp increase in cases starting in late October, peaking at approximately 14.5 cases in late November, followed by a rapid decline to around 7 cases by early December. The number of cases then remains relatively stable, fluctuating between 6 and 8 cases through April.
