B530-A-% rCV

The graph displays the daily number of COVID-19 cases in the United States from October to April. The y-axis represents the number of cases, and the x-axis represents time. A vertical dashed red line marks the start of the 'lockdown' period in late November. The graph shows a significant increase in cases during the lockdown, peaking in early January, followed by a sharp decline and a period of relative stability with minor fluctuations.

The graph displays the daily number of COVID-19 cases in the United States from October to April. The y-axis represents the number of cases, and the x-axis represents time. A vertical dashed red line marks the start of the data series. The graph shows a significant peak in cases around late March/early April, followed by a sharp decline.
