The graph displays the daily count of COVID-19 cases in the United States from November to April. The x-axis represents time in months, and the y-axis represents the number of cases. The data shows a general upward trend with significant daily fluctuations. A major peak occurs in early March, where cases exceed 100,000. Following this peak, there is a period of decline and stabilization, with cases fluctuating between 20,000 and 40,000 through April.

Month	Approximate Daily Case Range
Nov	10,000 - 20,000
Dec	15,000 - 30,000
Jan	20,000 - 40,000
Feb	25,000 - 50,000
Mar	20,000 - 100,000+ (Peak)
Apr	20,000 - 40,000

The line graph displays the daily number of COVID-19 cases in the United States from November to April. The x-axis represents time, with labels for November, December, January, February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a general upward trend in cases throughout the period, with a notable peak in late March reaching nearly 100,000 cases. Following this peak, there is a sharp decline in cases, which then begins to rise again in early April.
