The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled 'Number of cases' and ranges from 0 to 100,000 in increments of 20,000. The x-axis shows months from November to April. A red dashed vertical line is positioned at the beginning of December, indicating the start of the second wave. The data shows a first wave peaking in late October at approximately 60,000 cases, followed by a decline and then a second, much larger wave peaking in late February/early March at over 100,000 cases.

The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The y-axis represents the number of cases, ranging from 0 to 20. The x-axis represents time in months, with labels for Nov, Dec, Jan, Feb, Mar, and Apr. A vertical dashed red line is positioned at the beginning of December, indicating the start of the second wave. The data shows a period of relative stability in November, followed by a sharp increase in early December. The number of cases remains relatively low through January and February, but there is a significant spike in early March, reaching over 20 cases, followed by a period of fluctuation and a slight decline in April.
