The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of relative stability with minor fluctuations from October through December. A vertical red dashed line marks the end of December. In early March, there is a massive spike in cases, peaking at approximately 95,000. Following this peak, the case count drops sharply and then shows a gradual increase through April, ending at around 20,000 cases.
