The graph displays the daily count of COVID-19 cases in the United States. The x-axis is labeled with months: Nov, Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a grid extending up to 100,000. A vertical dashed red line is positioned at the beginning of the data series in early December. The data shows a period of low activity from late December through January, followed by a gradual rise starting in late January. A major peak occurs in late February/early March, reaching nearly 100,000 cases, followed by a sharp drop and then a period of relative stability at a low level through April.

The graph illustrates the daily reported COVID-19 cases in the Netherlands. The data shows a period of high case counts in late 2020, followed by a significant reduction after the lockdown. A major resurgence is visible in early 2021, peaking in March.

Month	Approximate Daily Cases (Range)
Nov	4,000 - 6,000
Dec	5,000 - 7,000 (before lockdown)
Jan	~1,000
Feb	~1,000 - 2,000
Mar	~1,000 - 9,500 (peak)
Apr	~1,000 - 2,000

The graph displays the daily count of COVID-19 cases in the United States. The data begins in early December, showing a period of relative stability followed by a rapid ascent. A major peak occurs in early January, reaching approximately 1,000,000 cases. After a period of fluctuation and a general downward trend, there is a second, very sharp spike in late February/early March, also reaching nearly 1,000,000 cases. The data ends in April, showing a slight increase from the previous low point.
