B530-A-% rCV

The graph displays the daily number of COVID-19 cases in the United States. The y-axis is labeled 'Number of cases' and ranges from 0 to 100,000. The x-axis is labeled 'Date' and spans from September to April. A red dashed vertical line at approximately November 20, 2019, indicates the 'lockdown' period. The data shows a sharp initial spike in late September, followed by a period of relative stability with minor fluctuations. A significant peak occurs in late November, just before the lockdown. Following the lockdown, the number of cases drops precipitously and remains at a low, stable level through April, with a minor secondary peak in late March.
