The graph displays the percentage of reads with a coverage value (rCV) over time. The y-axis represents %rCV, ranging from 1 to 6. The x-axis shows the months of July and October. Vertical dashed red lines indicate specific time points. A red square highlights a peak in late October.

The graph displays the percentage of reads with coverage variation (%rCV) over a five-month period. The y-axis is labeled '%rCV' and ranges from 0 to 8. The x-axis shows months from May to September. A black line with circular markers represents the daily %rCV. Four red dashed vertical lines are positioned at approximately May 10, May 25, June 15, and July 10. Four red square markers are placed on the data line at approximately June 25, July 25, August 10, and September 5, indicating specific time points of interest. The data shows a general trend of low %rCV (mostly below 2%) from May through July, followed by a period of higher variability and several sharp peaks in August and September, reaching a maximum of nearly 8% in early September.

The graph displays the percentage of reads with coverage variation (%rCV) over time. The y-axis is labeled '%rCV' and ranges from 0 to 10.0. The x-axis shows months from May to November 2019. A black line with circular markers represents the daily %rCV, with several peaks marked by red squares. Vertical dashed red lines indicate specific dates: May 10, May 20, June 10, July 10, and October 10. The highest peaks occur in late August/early September and late October/early November.
