The figure is a line plot showing the daily number of COVID-19 cases in the United States from May 2020 to April 2021. The x-axis represents time, with labels for July, October, January, and April. The y-axis represents the number of cases, with a grid but no numerical labels. The data is plotted as a black line with circular markers at each data point. The plot shows a major peak in early April 2020, reaching a level significantly higher than the rest of the period. This is followed by a sharp decline and a period of relative stability with minor fluctuations. Three vertical dashed red lines indicate the dates of the first, second, and third national lockdowns, which occur at approximately May 1, May 15, and September 15, 2020, respectively.

The graph displays the monthly average number of deaths in the United States from 1999 to 2002. The y-axis represents the number of deaths, ranging from 0 to 20. The x-axis represents time, with labels for July, October, January, and April. The data shows a general downward trend over the period, with significant fluctuations. A sharp spike in late 2001 is notable. Vertical dashed red lines indicate the start of the 1999-2000, 2000-2001, and 2001-2002 seasons.
