B530-A-% rCV

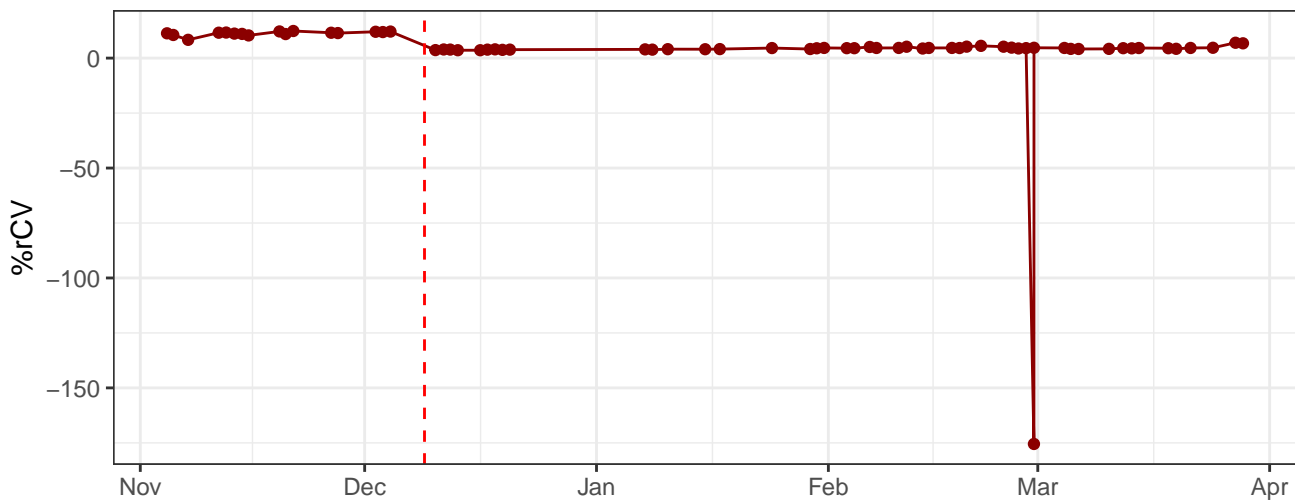

The graph displays the daily number of COVID-19 cases in the Netherlands. The first wave peaks in late December at approximately 10,000 cases. After a period of low activity, the second wave begins in late February, peaking in early March at nearly 10,000 cases. A vertical dashed red line is positioned at the end of December, separating the two waves.

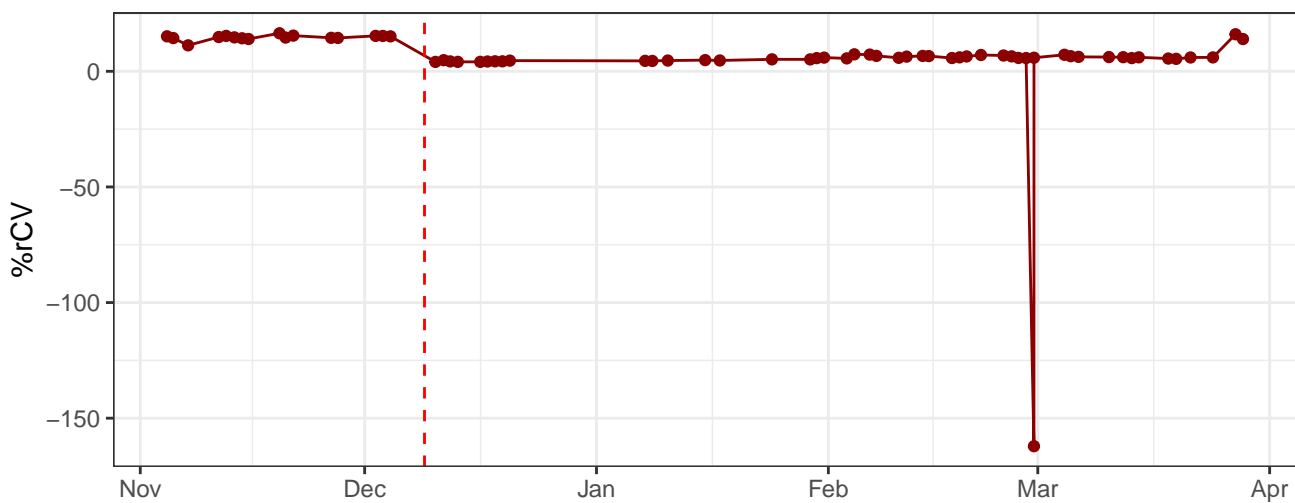

The graph displays the daily count of COVID-19 cases in the United States. The data begins in early December, showing a period of fluctuation with a peak in early January. After a decline, there is a major surge in late February/early March, reaching a peak of nearly 100,000 cases, followed by a period of relative stability in April.

The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of relative stability with minor fluctuations in November and December, followed by a rapid ascent starting in late December. A significant peak is observed in early March, reaching nearly 100,000 cases. After this peak, the number of cases declines but remains higher than the initial period, with a final uptick in late April.
