The line graph illustrates the daily count of COVID-19 cases in the United States from November to April. The x-axis represents time in months, with labels for Nov, Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a scale from 0 to 200,000 in increments of 20,000. The data shows a general upward trend with significant daily fluctuations. A major peak occurs in early March, where the case count exceeds 200,000. Following this peak, there is a sharp decline and then a period of relative stability around 100,000 cases, before a final decline in April.

Month	Approximate Daily Case Count Range
Nov	10,000 - 20,000
Dec	20,000 - 40,000
Jan	40,000 - 60,000
Feb	60,000 - 80,000
Mar	80,000 - 210,000 (Peak)
Apr	10,000 - 100,000

The graph displays the daily count of COVID-19 cases in the United States from November to April. The x-axis represents time in months, and the y-axis represents the number of cases. The data shows a general upward trend from November, with a notable peak in early March reaching over 100,000 cases. This is followed by a sharp decline in late March and a subsequent recovery in April.

Month	Approximate Daily Case Count Range
Nov	10,000 - 20,000
Dec	15,000 - 25,000
Jan	20,000 - 30,000
Feb	25,000 - 40,000
Mar	10,000 - 110,000 (Peak)
Apr	15,000 - 30,000

The graph displays the daily number of COVID-19 cases in the United States from November to April. The y-axis is labeled 'Number of cases' and ranges from 0 to 100,000 in increments of 10,000. The x-axis is labeled with the months: Nov, Dec, Jan, Feb, Mar, and Apr. The data shows two major peaks: one in early November reaching nearly 90,000 cases, and a second, higher peak in late February reaching approximately 100,000 cases. Between these peaks and after the second peak, the number of cases remains consistently low, generally below 10,000.
