The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A vertical dashed red line is positioned at approximately November 1st. The data shows a period of fluctuating case counts between September and early November, with peaks around 12-14 cases. Following the red line, there is a sharp spike to over 20 cases in early November, followed by a rapid decline and a period of low case counts (mostly below 5 cases) from January through April.
