B530-A-% rCV

The graph displays the daily count of COVID-19 cases in the United States. The data shows high volatility in late 2020, with a major peak in early January and another significant spike in late February/early March. A red dashed line marks the end of December, highlighting the period of rapid increase.

The graph illustrates the daily reported COVID-19 cases in the Netherlands. The data shows a period of high case counts in late 2020, followed by a sharp decline after the lockdown. A significant resurgence occurred in early 2021, peaking in March, before declining again and then showing a slight upward trend towards the end of the period shown.

The graph illustrates the progression of COVID-19 cases in the Netherlands. The initial period (November to early December) shows significant fluctuations with peaks around 80,000 cases. Following the first lockdown (late November), cases dropped to near zero. A second, more pronounced wave began in late February, peaking at approximately 95,000 cases in early March. After this peak, cases subsided but remained above the initial low levels, with a final notable increase in late April.
