The figure is a line plot showing the daily number of COVID-19 cases in the United States from June 1, 2020, to April 1, 2020. The x-axis represents time, with labels for July, October, January, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The plot shows a significant increase in cases starting in late June, peaking in early July at approximately 80,000 cases. This is followed by a decline and then a second, even sharper peak in early April, reaching nearly 100,000 cases. Vertical dashed red lines mark the dates of the first, second, and third national lockdowns, which occur around June 15, June 25, and November 1, respectively.

The graph displays the monthly variation of COVID-19 cases in the Veneto region. The y-axis represents the number of cases, ranging from 0 to 20. The x-axis represents time, with labels for Jul, Oct, Jan, and Apr. The data shows a highly volatile trend with several peaks, notably in July 2020, October 2020, and January 2021. A significant spike is visible in late March 2021, reaching over 20 cases. Vertical dashed red lines mark specific dates: May 15, June 15, and November 15, 2020.
