B530-A-% rCV

The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled 'Number of cases' and ranges from 0 to 10,000 in increments of 2,000. The x-axis is labeled 'Date' and shows months from September to April. A red dashed vertical line is positioned at the beginning of March, indicating the start of the lockdown. The data shows a very high initial peak in late September, followed by a period of lower case counts with some fluctuations. A second, smaller peak is visible in late March, after which the case counts generally decrease, with a slight uptick in early April.

The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of low case counts from late September through late December. A major surge begins in early January, peaking at approximately 95,000 cases. Following this peak, the case count drops sharply and remains relatively stable, fluctuating between 10,000 and 20,000 cases through April.

The graph displays the daily number of COVID-19 cases in the Netherlands from September to April 2020. The y-axis represents the number of cases, ranging from 0 to 20. The x-axis represents time, with labels for October, January, and April. A vertical dashed red line indicates the start of the lockdown in March. The data shows a period of relative stability in September and October, followed by a significant increase in cases starting in November. A major peak occurs in March 2020, reaching over 20 cases. Following the lockdown, there is a sharp decline in cases, with a notable drop in April.
