

The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled 'Number of cases' and ranges from 0 to 10,000 in increments of 2,000. The x-axis shows the months from November to April. A red dashed vertical line is positioned at the beginning of December, indicating the start of the second wave. The data shows a first wave peaking in late November at approximately 4,000 cases. After a decline, the second wave begins in December, reaching a peak of nearly 10,000 cases in early March. Following this peak, the number of cases declines significantly but remains above the baseline, with a small increase in April.

The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The y-axis represents the number of cases, with major grid lines every 20,000 units. The x-axis shows the months. A red dashed vertical line is positioned at the beginning of December, indicating the start of the second wave. The first wave peaks in late November at approximately 20,000 cases. The second wave begins in December, rises sharply to a peak of nearly 100,000 cases in early March, and then shows a significant decline towards the end of the period shown.

The graph displays the daily number of COVID-19 cases in the United States from November to April. The x-axis represents time, with labels for November, December, January, February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. A vertical dashed red line is positioned at the end of December, indicating the start of the period of rapid increase. The data shows a significant rise in cases starting in late December, peaking in early March at approximately 100,000 cases, and then declining towards the end of the period shown.

The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The y-axis represents the number of cases, with major grid lines at 0, 20,000, 40,000, 60,000, 80,000, and 100,000. The x-axis shows the months from November to April. A red dashed vertical line is positioned at the beginning of December, indicating the start of the second wave. The data shows a period of relative stability in November, followed by a sharp increase in early December. The number of cases continues to rise through January, peaking at approximately 90,000 in early February. After a period of fluctuation, there is a very sharp spike in early March, reaching nearly 100,000 cases, followed by a rapid decline in April.

The graph displays the daily number of COVID-19 cases in the Netherlands. The x-axis is labeled with months: Nov, Dec, Jan, Feb, Mar, Apr. The y-axis represents the number of cases, with a grid line at 100,000. A red dashed vertical line is positioned at the beginning of December. The data shows a first wave peaking in late October at approximately 70,000 cases. After a period of relative stability, a second wave begins in early December, characterized by a sharp increase. This second wave reaches its peak in late February/early March, with cases exceeding 100,000 daily. Following the peak, there is a decline and then a slight uptick in cases towards the end of April.
