The line graph displays the daily number of COVID-19 cases in the United States from November to April. The x-axis represents time, with labels for November, December, January, February, March, and April. The y-axis represents the number of cases, with a grid line at 100,000. The data shows a general upward trend from November, with a sharp increase in early March reaching a peak of approximately 150,000 cases, followed by a decline and then a slight uptick in April.

The graph displays the daily count of COVID-19 cases in the United States from November to April. The x-axis represents time in months, and the y-axis represents the number of cases, ranging from 0 to 120,000. The data shows a general upward trend with significant fluctuations. A major peak occurs in early March, reaching approximately 110,000 cases. Following this peak, there is a sharp decline and then a period of relative stability around 40,000 cases, before a slight increase in April.

Month	Approximate Daily Case Count Range
Nov	10,000 - 25,000
Dec	15,000 - 30,000
Jan	20,000 - 40,000
Feb	25,000 - 50,000
Mar	10,000 - 110,000
Apr	15,000 - 50,000

The line graph illustrates the daily count of COVID-19 cases in the United States from November to April. The x-axis represents time, with labels for November, December, January, February, March, and April. The y-axis represents the number of cases, with a grid line at 100,000. The data shows a general upward trend with significant daily fluctuations. A major peak occurs in early March, where the case count exceeds 100,000. Following this peak, there is a period of decline and stabilization, with a slight increase in cases towards the end of the period shown.
