The graph displays the daily count of COVID-19 cases in the United States. The data begins in late September, showing a period of low activity. A significant spike occurs in early February, peaking at approximately 95,000 cases. Following this peak, the case counts decline and remain relatively stable at low levels through April.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 5, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A vertical dashed red line is positioned at the end of December. The data shows a period of relative stability around 5 cases in late September, followed by a rise to a peak of approximately 14 cases in late December. After the red line, there is a sharp decline to near-zero cases in early January, followed by a massive spike to over 20 cases in early January, and then a return to low levels by mid-January, with minor fluctuations thereafter.
