B530-A-% rCV

The graph displays the percentage of relative coefficient of variation (%rCV) over time. The y-axis is labeled '%rCV' and ranges from 0 to 40. The x-axis shows months from September to April. A vertical dashed red line is positioned at approximately November 15. Before this line, the %rCV values are highly variable, with a major peak of nearly 40% in early September. Following the dashed line, the values drop significantly and remain mostly below 5% for the rest of the period, with a single spike to about 16% in late March.

The graph displays the percentage of relative coefficient of variation (%rCV) on the y-axis (0 to 30) against time on the x-axis (September to April). A red dashed vertical line is positioned at approximately November 15. Before this line, the %rCV values are highly variable, with a major peak of over 30% in early September and several other fluctuations between 10% and 20%. After the red line, the %rCV values are consistently low, mostly below 10%, with a single sharp spike to 20% in late March.

The graph displays the percentage of relative coefficient of variation (%rCV) over time. The y-axis is labeled '%rCV' and ranges from 0 to 60. The x-axis shows months from September to April. A vertical dashed red line is positioned at approximately November 15. Before this line, the %rCV values are generally higher, with a major peak of nearly 60% in early September. Following the red line, the values drop and remain relatively low, mostly below 10%, with a notable spike to 26% in late March.
