The graph displays the daily count of COVID-19 cases in the United States from November to April. The x-axis represents time in months, and the y-axis represents the number of cases. The data shows a general upward trend with significant daily fluctuations. A major peak occurs in early March, reaching over 100,000 cases, followed by a sharp drop and then a period of relative stability with some minor fluctuations.

Month	Approximate Daily Case Range
Nov	10,000 - 25,000
Dec	15,000 - 30,000
Jan	20,000 - 40,000
Feb	25,000 - 50,000
Mar	10,000 - 105,000
Apr	15,000 - 40,000

The graph displays the daily count of COVID-19 cases in the United States from November to April. The x-axis represents time in months, and the y-axis represents the number of cases, ranging from 0 to 120,000. The data shows a general upward trend with significant fluctuations. A major peak occurs in early March, reaching approximately 105,000 cases. This is followed by a sharp decline to around 10,000 cases in mid-March, and then a recovery to about 40,000 cases by late March. The data ends in early April with approximately 25,000 cases.

Month	Approximate Daily Case Count Range
Nov	10,000 - 25,000
Dec	15,000 - 30,000
Jan	20,000 - 40,000
Feb	25,000 - 50,000
Mar	10,000 - 105,000
Apr	15,000 - 40,000

The graph displays the daily number of new COVID-19 cases in the United States from November 2020 to April 2021. The x-axis represents time, with labels for November, December, January, February, March, and April. The y-axis represents the number of cases, with a grid line at 100. The data shows a general upward trend from November, with a significant peak in early March 2021, reaching over 100 cases per day. Following this peak, there is a sharp decline and a subsequent rise in late March and early April.
