The graph displays the daily number of COVID-19 cases in the United States. The y-axis is on a logarithmic scale, with major ticks at 100,000 and 1,000,000. The x-axis spans from October to April. A red dashed vertical line is positioned at the beginning of the data series in early November. The data shows a period of low case counts (mostly below 100,000) from November to December, followed by a massive spike in early January that exceeds 1,000,000 cases. After this peak, the case counts decline and remain relatively low through April.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A vertical dashed red line is positioned at the end of December. The data shows a first wave peaking in late December at approximately 14 cases. Following the red line, there is a sharp spike in early January, reaching a peak of over 20 cases. After this spike, the case count drops and remains relatively low, fluctuating between 2 and 8 cases through April.
