The graph displays the daily number of COVID-19 cases in the United States. The y-axis is on a logarithmic scale, with major ticks at 100,000 and 1,000,000. The x-axis spans from October to April. A vertical dashed red line is positioned at the beginning of the data series in early November. The data shows a period of low case counts (mostly below 100,000) from November to December, followed by a massive spike in early January that exceeds 1,000,000 cases. After this peak, the case counts decline and remain relatively low through April.

The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of relative stability and low case counts from late September through mid-November. Starting in mid-November, there is a rapid increase in cases, peaking at over 20 cases in early December. This is followed by a sharp decline in late December, with cases remaining at low levels through April. A vertical dashed red line marks the transition point in mid-November.
