The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for October, January, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. A vertical dashed red line is positioned at the end of October. The data shows a period of low case counts (mostly below 10,000) from October through late December. Starting in early January, there is a sharp and sustained increase in cases, reaching a peak of approximately 100,000 in early January. Following this peak, the case counts fluctuate significantly, with several smaller peaks and troughs, but generally remain higher than the initial October period, ending around 20,000 cases in April.

The graph displays the daily number of COVID-19 cases in the United States from October to April. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows the months from October to April. A vertical dashed red line is positioned at the beginning of the data series, around late October. The data shows a general upward trend with significant fluctuations, including a sharp peak in early April followed by a decline.

The graph displays the daily number of COVID-19 cases in the United States. The y-axis is labeled 'Number of cases' and ranges from 0 to 100,000 in increments of 20,000. The x-axis is labeled 'Date' and shows months from Oct to Apr. A vertical dashed red line is positioned at approximately November 1st. The data shows a major peak in cases around late November/early December, reaching nearly 100,000 cases. Following this peak, there is a period of relative stability with minor fluctuations, followed by a second, smaller peak in late March/early April, reaching approximately 40,000 cases.

The graph displays the daily number of COVID-19 cases in the Netherlands from October to April. The y-axis represents the number of cases, ranging from 0 to 15. The x-axis shows the months of the year, with labels for October, January, and April. A red dashed vertical line is positioned at the start of the second wave, around late December/early January. The data shows a significant peak in cases around late December/early January, followed by a sharp decline and a subsequent rise in cases starting in late February.

The graph displays the monthly average of COVID-19 cases in the Netherlands. The y-axis is labeled with values 7.5, 10.0, 12.5, and 15.0. The x-axis is labeled with months: Oct, Jan, and Apr. A vertical dashed red line is positioned at the end of December 2020. The data shows a steady increase from October, peaking at approximately 14.5 cases in early January 2021, followed by a sharp drop to around 7.0 cases by mid-January. There is a notable spike to 15.0 cases in late January, followed by a decline and then a slight increase in February and March.
