The scatter plot displays daily case counts over time. The y-axis represents the number of cases, with major grid lines every 20 units from 0 to 100. The x-axis represents time, with labels for April, July, October, and January. Data points are black dots. A red dashed line is positioned at approximately 95 cases. A red solid line is at approximately 100 cases. A red dashed line is at approximately 105 cases. The data shows a general upward trend with some fluctuations, peaking around 100 cases in late October/early November, followed by a sharp decline to near zero in January.

The scatter plot displays daily case counts over time. The y-axis represents the number of cases, with major grid lines every 20 units from 0 to 100. The x-axis represents time, with labels for April, July, October, and January. Data points are shown as black dots. A red dashed vertical line is positioned at approximately October 15, and a red solid vertical line is at approximately October 25. The data shows a period of high activity (mostly above 80 cases) from April through September, followed by a sharp decline to near zero in October and November, with a single outlier in early December.
