The graph displays the daily number of COVID-19 cases in the Netherlands from October to April. The y-axis represents the number of cases, ranging from 0 to 15. The x-axis represents time, with labels for October, January, and April. A red dashed vertical line is positioned at the end of December, indicating the start of the second wave. The first wave peaks in late December at approximately 12 cases. The second wave begins in early January, remains low until late February, and then rises sharply to a peak of 15 cases in early March, before declining again.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 7.5, 10.0, 12.5, and 15.0. The x-axis is labeled with months: Oct, Jan, and Apr. A red dashed vertical line is positioned at approximately March 11, 2020. The data shows a significant peak in cases just before the red line, reaching a maximum of about 15.0 cases. After the red line, the number of cases drops sharply and remains relatively low, fluctuating between approximately 6.0 and 8.0 cases for the remainder of the period shown.

The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of relative stability with minor fluctuations from October through the end of December. A vertical dashed red line marks the end of December. In early January, there is a massive spike in cases, reaching a peak of approximately 95,000. Following this peak, the number of cases drops sharply and remains relatively low and stable through April, with only minor fluctuations.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A red dashed vertical line is positioned at approximately March 11, 2020. The data shows a period of low case counts from October 2020 through early 2021, followed by a sharp increase starting in late 2021, peaking at over 20 cases in early 2022, and then declining.
