The graph displays the daily number of COVID-19 cases in the United States from October to April. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows the months from October to April. A vertical dashed red line is drawn at the end of December, indicating the point where the number of cases began to decline significantly. The data shows a sharp increase in cases starting in late December, peaking in early January at approximately 100,000 cases, and then declining to around 20,000 cases by April.

The graph displays the daily number of COVID-19 cases in the Netherlands. The x-axis is labeled with months: Oct, Jan, and Apr. The y-axis is labeled with case counts: 5, 10, and 15. A red dashed vertical line is positioned at approximately November 25th. The data shows a first wave peaking at about 12 cases in late November, followed by a decline to around 2 cases by early January. A second, much larger wave begins in late January, peaking at 15 cases in late March, and then declining to around 2 cases by late April.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 7.5, 10.0, 12.5, and 15.0. The x-axis is labeled with months: Oct, Jan, and Apr. A red dashed vertical line is positioned at approximately January 20, 2020. The data shows a period of low case counts (mostly below 7.5) from October through late December. Starting in early January, there is a rapid increase, with cases reaching a peak of about 15.0 in early January. Following this peak, the case count drops sharply to around 7.5 by mid-January and then remains relatively stable, fluctuating between 6.0 and 8.0 cases through April.
