The scatter plot displays the daily number of cases in the Netherlands from November to April. The y-axis, labeled 'Number of cases per day', ranges from 1.26 to 1.35. The x-axis shows the months: Nov, Dec, Jan, Feb, Mar, and Apr. A vertical dashed red line is positioned at the end of December. The data points indicate a significant increase in cases starting in early January, peaking in mid-January, and then fluctuating at a high level through February and March.

Month	Day (approx.)	Number of cases per day (approx.)
Nov	1	1.24
Nov	2	1.24
Dec	1	1.24
Dec	2	1.24
Dec	15	1.35
Jan	10	1.35
Jan	11	1.35
Jan	15	1.35
Feb	1	1.35
Feb	15	1.35

The scatter plot displays the daily number of cases in the Netherlands from November to April. The y-axis, labeled 'Number of cases per day', ranges from 1.15 to 1.25. The x-axis shows the months from Nov to Apr. A vertical dashed red line is positioned at approximately December 15th. The data points indicate a significant increase in cases starting around this date, with values rising from approximately 1.15 in late November to a peak of about 1.24 in early January, and then fluctuating between 1.23 and 1.24 through February and March.

Date (approx.)	Number of cases per day
Nov 10	1.15
Nov 15	1.15
Dec 10	1.15
Dec 15	1.15
Dec 20	1.24
Jan 5	1.24
Jan 10	1.24
Jan 15	1.24
Feb 5	1.24
Feb 20	1.23

[illegible]

The graph displays the daily count of COVID-19 cases in the United States from November to April. The y-axis scale goes up to 100,000. A vertical dashed red line marks the end of December. The data shows a peak in early December, a sharp drop in January, a major spike in early March, and a subsequent decline and then a slight rise towards the end of the period.

The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The y-axis represents the number of cases, with major grid lines at 0, 2,000, 4,000, 6,000, 8,000, and 10,000. The x-axis shows the months from November to April. A vertical dashed red line is positioned at the beginning of December, indicating the start of the second wave. The first wave peaks in late November at approximately 8,000 cases. The second wave peaks in early March at approximately 10,000 cases. The graph shows a significant increase in cases starting in late December, peaking in early March, and then declining.

The graph displays the daily count of COVID-19 cases in the United States. The data begins in early December, showing a period of relative stability with minor fluctuations between 10,000 and 20,000 cases. A sharp increase begins in late December, peaking in early January at approximately 100,000 cases. Following this peak, the case count declines and remains relatively low until late February, when it spikes again to nearly 100,000 cases. The data ends in late April, showing a final rise to approximately 40,000 cases.

The graph displays the daily number of COVID-19 cases in the Netherlands. The x-axis is labeled with months: Nov, Dec, Jan, Feb, Mar, Apr. The y-axis represents the number of cases, with a grid line at 10,000. A red dashed vertical line is positioned at the beginning of December. The data shows a first wave peaking in late October at approximately 6,000 cases. After a period of relative stability, a second, much larger wave begins in early March, peaking at nearly 10,000 cases. Following this peak, the number of cases declines significantly by mid-March and remains at a lower level through April.

The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The y-axis represents the number of cases, ranging from 0 to 20. The x-axis represents time in months, with labels for Nov, Dec, Jan, Feb, Mar, and Apr. A vertical dashed red line is positioned at the end of December, indicating the start of the second wave. The data shows a period of relative stability in November, followed by a sharp increase in late December. A major peak occurs in early March, reaching over 20 cases, followed by a decline and then a slight uptick in April.
