B530-A-% rCV

The graph displays the daily count of COVID-19 cases in the United States. The x-axis is labeled with months: Nov, Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a grid extending up to 100,000. A vertical dashed red line is positioned at the beginning of the data series in early December. The data shows a significant rise in cases starting in late December, reaching a peak of approximately 100,000 cases in early January. Following this peak, the number of cases gradually declines through February and March, with a notable spike in late March reaching about 40,000 cases, before stabilizing around 10,000 cases by April.

The graph displays the daily count of COVID-19 cases in the United States. The data begins in early December with a low number of cases. There is a period of relative stability until late February, after which the case count rises sharply, reaching a peak of nearly 100,000 in early March. Following this peak, the number of cases decreases significantly, remaining at a low level through April.

The graph illustrates the daily reported COVID-19 cases in the Netherlands. The data shows a period of high case counts (between 4,000 and 7,000) from November through early December. Following the implementation of the lockdown, indicated by the dashed red line, the number of cases dropped precipitously to approximately 1,000. For the remainder of the period shown, cases remained at low levels, generally below 2,000, with a notable exception being a sharp spike in early March that reached nearly 10,000 cases.

The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled 'Number of cases' and ranges from 0 to 100,000 in increments of 20,000. The x-axis shows months from November to April. A vertical dashed red line is positioned at the beginning of December. The data shows a period of low case numbers from November through early February, followed by a rapid ascent to a peak of nearly 100,000 cases in early March, and then a subsequent decline and stabilization at a lower level through April.

The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of fluctuation with an upward trend from November through early December, followed by a sharp decline and a period of low case counts from January through February. A major peak occurs in early March, reaching over 20 cases, before declining again. A red dashed vertical line at the beginning of December indicates the start of the lockdown period.
