The graph displays the daily number of COVID-19 cases in the United States from October to April. The y-axis represents the number of cases, ranging from 0 to 1,000,000. The x-axis shows the months from October to April. A vertical dashed red line is positioned at approximately December 20th, indicating the start of a significant upward trend. Before this line, the number of cases remains relatively low, fluctuating between approximately 100,000 and 300,000. After the dashed line, the number of cases increases sharply, reaching a peak of nearly 1,000,000 in early January. Following the peak, the number of cases fluctuates significantly, with several subsequent peaks and troughs, but generally remains at a high level, often exceeding 500,000 cases per day.

The graph displays the daily number of COVID-19 cases in the United States. The x-axis represents time, with labels for October, January, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. A vertical dashed red line is positioned at approximately November 1, 2020. The data shows a period of relative stability around 20,000 cases from October to November. Following the dashed line, there is a sharp increase to nearly 80,000 cases by early December. The number of cases continues to rise, peaking at over 100,000 in late January. This is followed by a period of fluctuation between 60,000 and 80,000 cases through February and March. A significant drop occurs in early April, where cases fall to near zero, before a rapid recovery to approximately 60,000 cases by mid-April.
