The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January 1 to late February. Starting in late February, there is a significant upward trend, with cases rising sharply to a peak of approximately 100,000 in early March. Following the peak, the number of cases begins to decline, returning to levels below 10,000 by mid-March, and continuing a gradual downward trend through April 1.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January 1 to late February. Starting around February 20, there is a significant upward trend. The number of cases rises sharply to a peak of approximately 100,000 in early March. Following the peak, the case count begins to decline, showing some fluctuations but generally trending downwards towards the end of the period shown.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 2, 3, 4, 5, and 6. The x-axis is labeled with the months Feb, Mar, and Apr. The data points are connected by a solid black line. A significant peak is visible in early March, reaching a value above 6. The data shows high volatility with frequent daily fluctuations.
