The graph displays the daily number of new COVID-19 cases in the United States from January 1 to April 1, 2020. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a highly volatile trend with a major peak in late March, reaching nearly 100,000 cases, followed by a sharp decline and a subsequent rise in early April.

The graph displays the daily number of new COVID-19 cases in the Netherlands from January 2020 to April 2020. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a grid line at 10,000. The data shows a highly volatile trend with several peaks. A major peak occurs in late March, reaching approximately 11,000 cases. Following this peak, there is a sharp decline and a period of relative stability around 5,000 cases in early April, followed by another sharp drop and a slight recovery by the end of the month.

The graph displays the daily number of new COVID-19 cases in the United States from January 1 to April 1, 2020. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a grid line at 100. The data shows a period of low activity in January, followed by a sharp increase in late February, peaking at over 100 cases per day in early March. This is followed by a decline and then a resurgence in late March/early April, reaching another peak around 40 cases per day.
