The graph displays the daily count of new COVID-19 cases in the United States. The x-axis represents time from January 1 to April 1, 2020. The y-axis represents the number of cases, with a scale break between 100,000 and 1,000,000. A prominent spike occurs in late February, with cases exceeding 1,000,000. Following this, there is a period of relative stability with a smaller spike in early March, and then a gradual decline towards the end of the period shown.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January 1 to late February. Starting in late February, there is a rapid increase in cases, reaching a peak of approximately 100,000 in early March. Following the peak, the number of cases begins to decline, showing some fluctuations but generally trending downwards towards the end of the period shown.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 2, 3, 4, 5, and 6. The x-axis is labeled with the months Feb, Mar, and Apr. The data points are connected by a solid black line. A significant peak is observed in early March, reaching a value above 6. Following this peak, the number of cases drops sharply and then fluctuates between 2 and 3 for the remainder of the period shown.
