B530-A-% rCV

The graph illustrates the daily reported COVID-19 cases in the Netherlands. The data shows a significant peak in early December, followed by a rapid decline due to the lockdown. A notable spike occurs in early March, likely due to a change in reporting or a localized outbreak, before cases stabilize at a low level through April.

The graph displays the daily count of COVID-19 cases in the United States. The data shows high volatility in late 2020, with a major peak in early January and another significant spike in early March. A vertical dashed red line marks the end of December, after which the case counts generally decreased but remained above the baseline, with a notable resurgence in March.

The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of relative stability with minor fluctuations in November and December, followed by a rapid ascent starting in late December. A significant peak is observed in early March, reaching nearly 100,000 cases. After this peak, the number of cases declines but remains higher than the initial period, with a final uptick in late April.
