The graph displays the daily count of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for January, February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 120,000 in increments of 20,000. The data shows a period of low case counts (below 10,000) from January through early February. A massive spike occurs in early March, with cases peaking at approximately 110,000. Following this peak, the case count drops sharply to around 10,000 and then fluctuates between 10,000 and 20,000 through April.

Date	Number of Cases (Approximate)
Jan 1	5,000
Jan 15	8,000
Feb 1	10,000
Feb 15	12,000
Mar 1	110,000
Mar 15	10,000
Apr 1	20,000

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with the months Jan, Feb, Mar, and Apr. The data points are connected by a black line, and each point is marked with a black dot. The number of cases remains low (below 10) until late February, when it begins a sharp ascent, reaching a peak of approximately 20 cases in early March. Following this peak, the number of cases declines sharply, returning to levels below 10 by mid-March, and then fluctuates slightly between 7 and 8 cases through April.
