The graph displays the daily number of COVID-19 cases in the Netherlands from November to April. The y-axis represents the number of cases, with major grid lines at 0, 2,000, 4,000, 6,000, 8,000, and 10,000. The x-axis shows the months from Dec to Apr. A red dashed vertical line is positioned at the end of December, indicating the start of the second wave. The data shows a significant increase in cases starting in late December, peaking in early January at approximately 10,000 cases. Following this peak, the number of cases declines and remains relatively low until late February, when a second, smaller peak occurs at approximately 3,000 cases. After this second peak, the number of cases declines again, remaining below 1,000 by April.

The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled with values 5, 10, and 15. The x-axis shows the months from December to April. A red dashed vertical line is positioned at the beginning of December. The data shows a significant increase in cases starting in late November, peaking at approximately 12 cases in early December. Following this, there is a sharp decline and a period of low case counts throughout January. A second wave begins in late February, reaching a peak of 15 cases in early March, before declining again in April.

The graph displays the daily number of COVID-19 cases in the United States from November to April. The y-axis represents the number of cases, with major grid lines at 7.5, 10.0, 12.5, and 15.0. The x-axis shows the months from December to April. A vertical dashed red line is positioned at the end of December. The data shows a significant increase in cases starting in late December, peaking at approximately 15.0 cases in early March, followed by a decline and then a slight increase in April.
